# **CONTAINMENT ZONE ALERTING APPLICATION**

## **1. INTRODUCTION**

### **1.1 PROJECT OVERVIEW**

Currently there are several research works undergoing in the country to prevent Covid-19 cases from rising. Previously our country was importing medical kits like PPE (Personal Protection Kits), mask from outside, but now it has been successful in developing these kits. Along with taking initiatives to fight this disease, our country has also taken steps to make people aware of the disease. The news and media have a great part in creating this awareness by informing the public about the preventive measures that can keep them away from infection. Awareness among the people to carry out all the preventive measures can immensely help to reduce spread of the virus. The country has created containment zones throughout the cities wherever Covid-19 cases have been reported to prevent further spread of the virus. These containment zones have been kept isolated from the outside public to ensure no contamination occurs outside.

After more than 2 months of the lockdown, the government has relaxed some of the lockdown rules and has permitted reopening of government offices, bus and other road transportation facilities and shopping markets. People can move inside the city for work and other purposes. But the containment zones are still being kept isolated, and new containment zones are being formed wherever Covid-19 cases have been reported. These zones are highly contagious as droplets with virus coughed out from an unscreened asymptomatic patient can travel up to 8 m (Bahl et al. [2020](#)). Though these containment zones are guarded by policemen, still there remains a chance that people might unknowingly step into them. In this situation where people can move in the city, these containment zones pose a risk of infection to these city dwellers. Therefore, informing people about the location of the containment zones can help them bypass and avoid these zones and thereby reduce the chance of community transmission.

### **1.2 PURPOSE**

The Android application shows the location of the containment zones to the users. It also notifies the user when he or she trespasses the boundary of a containment zone or stays in the containment zones

## **2. LITERATURE SURVEY**

### **2.1 Existing problem:**

People doesn't have proper knowledge about containment zones since they do change daily and hard to keep updated and if they are not updated properly, they will lead to wide spread of disease.

## 2.2 References:

### PAPER 1

Development of An Android Application for Viewing Covid19 Containment Zones and Monitoring Violators.

**Author:**

Ranajoy Mallik

**Published:**

May 11 2020

The World Health Organization has declared the outbreak of the novel corona virus, COVID-19 as pandemic across the world. With its alarming surge of affected cases throughout the world, lockdown and awareness (social distancing, use of masks etc) among people are found to be the only means for restricting the community transmission. In a densely populated country like India, it is very difficult to prevent the community transmission even during lockdown without social awareness and precautionary measures taken by the people. Recently, several containment zones had been identified throughout the country and divided into red, orange and green zones, respectively. The red zones indicate the infection hotspots, orange zones denote some infection and green zones indicate an area with no infection. This paper mainly focuses on development of an Android application which can inform people of the COVID-19 containment zones and prevent trespassing into these zones. This Android application updates the locations of the areas in a Google map which are identified to be the containment zones. The application also notifies the users if they have entered a containment zone and uploads the user's IMEI number to the online database. With this IMEI number, the police can keep an eye on the people who are frequently violating the lockdown rules. To achieve all these functionalities, many tools and APIs from Google like Firebase and Geofence are used in this app. Therefore, this application can be used as a tool for creating further social awareness about the arising need of precautionary measures to be taken by the people of India.

A real-time database is created in Google Cloud Firestore which contains all the data related to the containment zones like latitudes, longitude, radius and zone names. Cloud Firestore features a NoSQL, document-oriented database (Firebase Cloud Firestore). There are no tables or rows. Instead, the location data are stored in documents, which are organized into collections. All the containment zones are stored in a collection in which each containment zone is represented as an individual document. Each document has four fields namely "Lat", "Long", "location Name" and "radius" for storing latitudes, longitudes, location names and radius, respectively. The Cloud firestore is connected to the android application by registering the SHA-1 (Secure Hash Algorithm

1) certificate fingerprint of the application in the Firebase project settings. After the database is connected, the location data of the containment zones can be retrieved by the Android application and can be shown in Google map.

### PAPER 2

Taking Location-based Notifications to the Next Level

**AUTHOR NAME:**

Geofencing

**PUBLICATION YEAR:**

May 6 2006

Sandro Rodriguez Garzon Bersant Deva The basic Android application that served as the prototype Geofencing client was used. This client is primarily responsible for carrying out the geofencing server's ongoing location update strategy. This must be accomplished with little energy consumption because the Geofencing client is located on a mobile device. We made the decision to employ the low energy Geofencing features of the Android operating system to keep an eye on the safety zone. As a result, a safety zone is considered as a single circular geofence with a required exit on the mobile device. However, they discovered that there was occasionally a significant lag time between leaving the safety zone and receiving a notification from the system about the leave. In order to address this issue, a specific amount of the safety zone's radius is decreased. While the safety zone and how it is implemented have a significant impact on overall energy consumption, it is also important to make the right choice when it comes to a placement mechanism. In order to reduce power consumption without compromising the necessary position precision, they used a device-based smart combination of various positioning mechanisms introduced by. By temporarily deactivating placement when a device is not in motion, the Geofencing client also makes use of cutting-edge mobile sensing capabilities integrated into the Android operating system's activity recognition unit. Mobile users who live close to a geo-border fence's will find this to be of particular utility. If the Geofencing server notifies the Geofencing client about a geonotice, the notification will appear right away.

### **PAPER 3**

COVID-19 Mobile Apps: A Systematic Review of the Literature

**Author:**

Ido Zamberg

**Published:**

2020 Dec 9

The COVID-19 outbreak, which first emerged in China, has spread worldwide. On March 11, 2020, the World Health Organization (WHO) declared COVID-19 as a pandemic . The disease has disrupted global trade, employment, and travel, and many governments had to take strict measures to control the spread of the virus and minimize the burden of morbidity and mortality so that health care systems remain functional . In many countries around the world, citizens have been recommended to stay at home and practice social distancing for as long as possible as a primary measure of preventing the spread of COVID-19.

Although mobile apps are successfully used for managing chronic diseases , the ongoing COVID-19 pandemic has pushed the need for mobile app solutions at the forefront to reduce the risk of cross-contamination caused by close contact . Mobile technology has been leveraged in a number of ways to control the spread of COVID-19. Mobile apps are accessible, acceptable, and easily adopted, and have the ability to support social distancing efforts. As such, they have been widely developed and implemented during the previous months in an attempt to “flatten the curve” of the increasing number of COVID-19 cases, providing knowledge and information to civilians while attempting to relieve the pressure from health care systems.

Despite increasing reliance on mobile health (mHealth) solutions as part of COVID-19–related response plans, major knowledge gaps exist about their utility and efficacy during the current pandemic for both health professionals as well as for the general population. To this direction, this systematic review aims to shed light into studies found in the scientific literature on the use and evaluation of mobile apps for the prevention, management, treatment, or follow-up of COVID-19

### 2.3. Problem Statement Definition

#### Problem Statement 1:

### 3. IDEATION & PROPOSED SOLUTION

S.NO	PARAMETER	DESCRIPTION
1	This application is intended to provide information about containment zones in a particular region by alerting people, through continuous monitoring of an individual's location. Key benefits of the application are monitoring people's activity and alerting them to their safety movements	In a densely populated country like India, it is very difficult to prevent the community transmission even during lockdown without social awareness and precautionary measures taken by the people. Recently, several containment zones had been identified throughout the country and divided into red, orange and green zones, respectively. The red zones indicate the infection hotspots, orange zones denote some infection and green zones indicate an area with no infection.
2	In a densely populated country like India, it is very difficult to prevent the community transmission even during lockdown without social awareness and	This Android application updates the locations of the areas in a Google map which are identified to be the containment zones. The application also notifies the

	<p>precautionary measures taken by the people. Recently, several containment zones had been identified throughout the country and divided into red, orange and green zones, respectively. The red zones indicate the infection hotspots, orange zones denote some infection and green zones indicate an area with no infection.</p>	<p>users if they have entered a containment zone and uploads the user's IMEI number to the online database. To achieve all these functionalities, many tools, and APIs from Google like Firebase and Geofencing API are used in this application. Therefore, this application can be used as a tool for creating further social awareness about the arising need of precautionary measures to be taken by the people of India.</p>
3	<p>Our objective is to developing an android based application to identify the COVID-19 containment zone in India. We have used Geofencing and Firebase APIs (Application Program Interface) from Google as the base for development of this application.</p>	<p>Geofencing is a tool from Android which is used to create virtual boundaries or fences around geographical locations. The developers can add geofences at different locations by providing the latitudes and longitudes along with radius to highlight the proximity of the location. Geofencing technology senses the user's current location and checks whether that location belongs to the set of pre-identified geofences. After creating the geofences, each geofence has the permission to get information from the location services of Google about entering, dwelling and exit events triggered by the users of the application when they enter or exit the geofence. Upon receiving a trigger event, the geofences can be programmed to notify the user about the information of the location they have</p>

		entered or exited. These geofences can be useful in preventing its users from trespassing inside the targeted locations.
4	The Android application shows the location of the containment zones to the users. It also notifies the user when he or she trespasses the boundary of a containment zone or stays in the containment zones. All these functionalities are achieved by the help of Firebase and Geofencing tools from Google.	A real-time database is created in Google Cloud Firestore which contains all the data related to the containment zones like latitudes, longitude, radius and zone names. Cloud Firestore features a NoSQL, document-oriented database (Firebase Cloud Firestore). There are no tables or rows. Instead, the location data are stored in documents, which are organized into collections. All the containment zones are stored in a collection in which each containment zone is represented as an individual document. Each document has four fields namely “Lat”, “Long”, “location Name” and “radius” for storing latitudes, longitudes, location names and radius, respectively.

### 3.1 Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user’s behaviours and attitudes. It is a useful tool to help teams better understand their users. Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user’s perspective along with his or her goals and challenges

# EMPATHY MAPPING

## SAYS,

- ✓ Uses of the application?
- ✓ Purposes of the application?
- ✓ I want something reliable?

## THINKS,

- Quality of the application?
- This application is best?
- ✓ Is there any similar application available

## Does,

- ✓ Checked in the websites
- ✓ Checked in the youtube
- ✓ Makes small decisions
- ✓ Asking a friends

## Feels,

- ✓ Excited
- ✓ Anxious
- ✓ Fear
- ✓ Overwhelmed
- ✓ Confused

### 3.2 Ideation & Brainstorming

## Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

🕒 10 minutes to prepare  
🕒 1 hour to collaborate  
👥 2-8 people recommended

💬 Share template feedback

### Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

🕒 10 minutes

**A Team gathering**  
Define who should participate in the session and send an invite. Share relevant information or pre-work ahead.

**B Set the goal**  
Think about the problem you'll be focusing on solving in the brainstorming session.

**C Learn how to use the facilitation tools**  
Use the Facilitation Superpowers to run a happy and productive session.

Open article →

### Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

🕒 5 minutes

**PROBLEM**  
There is a pandemic situation due to COVID-19. It's a viral infectious disease so people should maintain social distance. In order to maintain social distance our application provides a strategy to avoid direct contact with each other.

### Key rules of brainstorming

To run an smooth and productive session

- 👤 Stay in topic.
- 💡 Encourage wild ideas.
- 👂 Defer judgment.
- 👂 Listen to others.
- 🗣️ Go for volume.
- 👁️ If possible, be visual.

### Need some inspiration?

See a finished version of this template to kickstart your work.

Open example →

2

## Brainstorm

Write down any ideas that come to mind that address your problem statement.

10 minutes

### ATCHAYA S

### PRIYADHARSHINI G

### JENITHA C

### KOWSALYA T

3

### Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go. Once all sticky notes have been grouped, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

⌚ 20 minutes

#### USER LOGIN

#### VERIFYING LOCATION

#### COLLECTING DETAILS

#### SENDING ALERT

#### DIFFERENTIATING ZONES

#### UPDATING ZONES

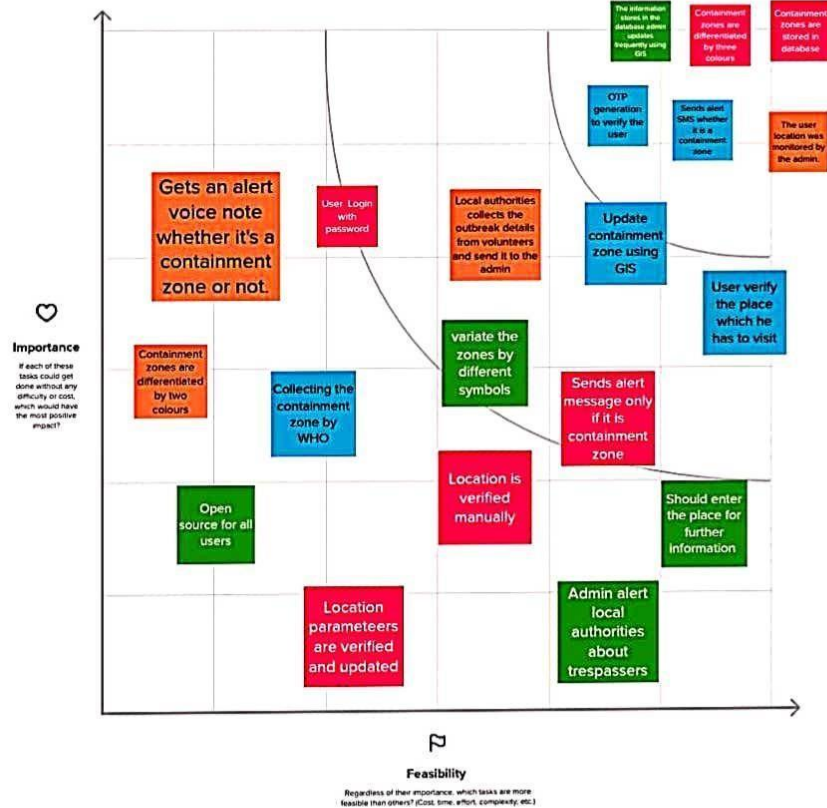

4

## Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

20 minutes

➔

## After you collaborate

You can export the mural as an image or pdf to share with members of your company who might find it helpful.

### Quick add-ons

- A Share the mural**  
Share a view link to the mural with stakeholders to keep them in the loop about the outcomes of the session.
- B Export the mural**  
Export a copy of the mural as a PNG or PDF to attach to emails, include in slides, or save in your drive.

### Keep moving forward

- Strategy blueprint**  
Define the components of a new idea or strategy.  
Open the template →
- Customer experience journey map**  
Understand customer needs, motivations, and obstacles for an experience.  
Open the template →
- Strengths, weaknesses, opportunities & threats**  
Identify strengths, weaknesses, opportunities, and threats (SWOT) to develop a plan.  
Open the template →

Share template feedback

## 3.4 Problem Solution fit

Define CS, AS, J&P, RC, TR, SL, CH, EM	<p>1. CUSTOMER SEGMENT(S) <b>CS</b></p> <p>The user/customer who belonging to the Business man</p>	<p>6. CUSTOMER CONSTRAINTS <b>CC</b></p> <p>There is no boundation of using this application Because the user/customer who is having knowledge Of this application can work on it easily.</p>	<p>5. AVAILABLE SOLUTIONS <b>AS</b></p> <p>So we can use google maps and GPS to show which area in least cases and more cases and other instructions, to the public knowledge.</p>	Explore AS, differentiate
	<p>2. JOBS-TO-BE-DONE / PROBLEMS <b>J&amp;P</b></p> <p>It is easy to analyse the issues and risks in containment Zones. it is best way to assist the peoples easily to Identify the disaster region and prevented from Danger. Detection and recognition of risk zones Using cloud computing are very efficient in providing Information about containment zones at its earliest.</p>	<p>9. PROBLEM ROOT CAUSE <b>RC</b></p> <p>Generally , we cannot identify the number of cases on area or in the particular location. Whether it is in red zone or normal zone or any instruction to survive on the particular area.</p>	<p>7. BEHAVIOUR <b>BE</b></p> <p>Easy to use Can be able to respond quickly Able to provide precise decision based on the disease Analysis Requirement of internet speed</p>	
Identify strong TR & EM	<p>3. TRIGGERS <b>TR</b></p> <p>Movement in containment zones will be monitored to ensure that nobody leaves or visits , except for medical emergencies</p>	<p>10. YOUR SOLUTION <b>SL</b></p> <p>The application is built which uses this model . The application update you to stay up to date regarding the number of cases ,both locally and nationally. The accurate numbers can help you assess your risk further.</p>	<p>8. CHANNELS of BEHAVIOUR <b>CH</b></p> <p>The user need to access the application .</p>	Extract online & offline CH of BE
	<p>4. EMOTIONS: BEFORE / AFTER <b>EM</b></p> <p>Before- The user/customer who never have used before makes them anxious After- As the user knows how to use this application then they will become comfortable and friendly in Environment</p>		<p>8.2 OFFLINE</p> <p>Store the data and information being transferred</p>	

#### 4.REQUIREMENT ANALYSIS

##### 4.1 Functional requirement

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Gmail. Registration through mobile number.
FR-2	User Confirmation	Confirmation via Email. Confirmation via OTP.
FR-3	Authentication	It checking the confirmation of the password.
FR-4	Business rule	For subscriber's we give first 3 day's free trail. For unsubsubscriber's the user needs to watch some advertisement for knowing the zone alert for first 3 day's. FR No. FR No.

##### 4.2 Non-Functional requirements

Following are the non-functional requirements of the proposed solution.

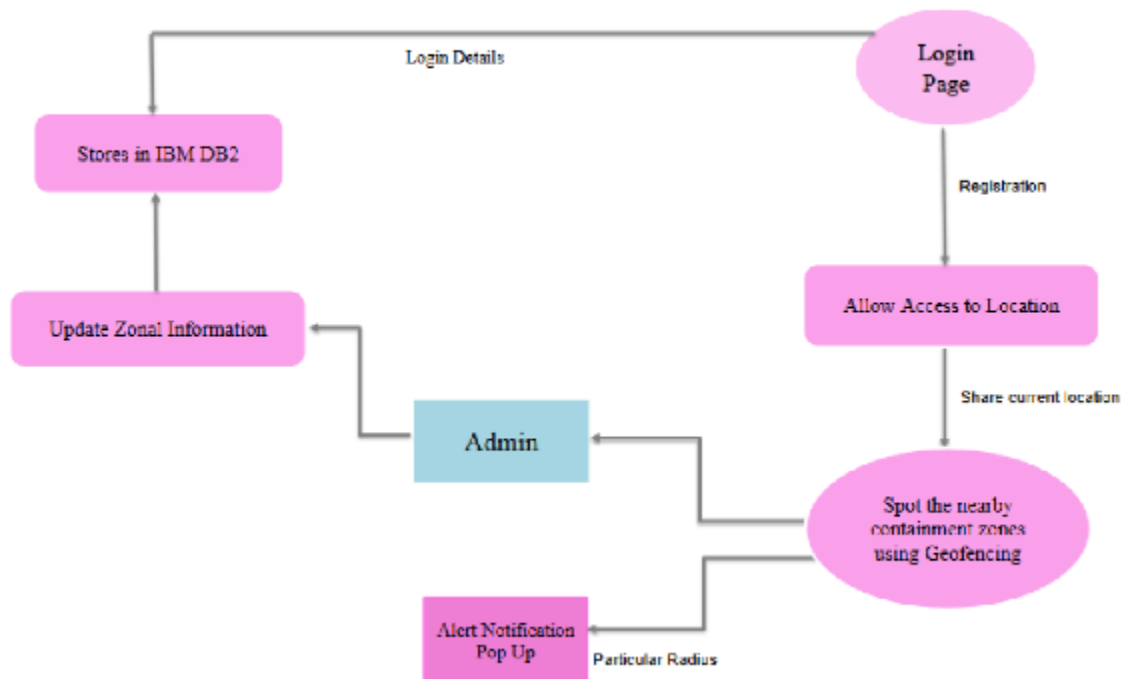

FR.NO.	Non-Functional Requirement	Description
NFR-1	Usability	Providing recommendation link by using customer preference
NFR-2	Security	The software team will issue some strong security code for the user's.
NFR-3	Reliability	The database update process must rollback all related updates when any update fails.
NFR-4	Performance	The loading speed of the server is quick and fast.

## 5.PROJECT DESIGN

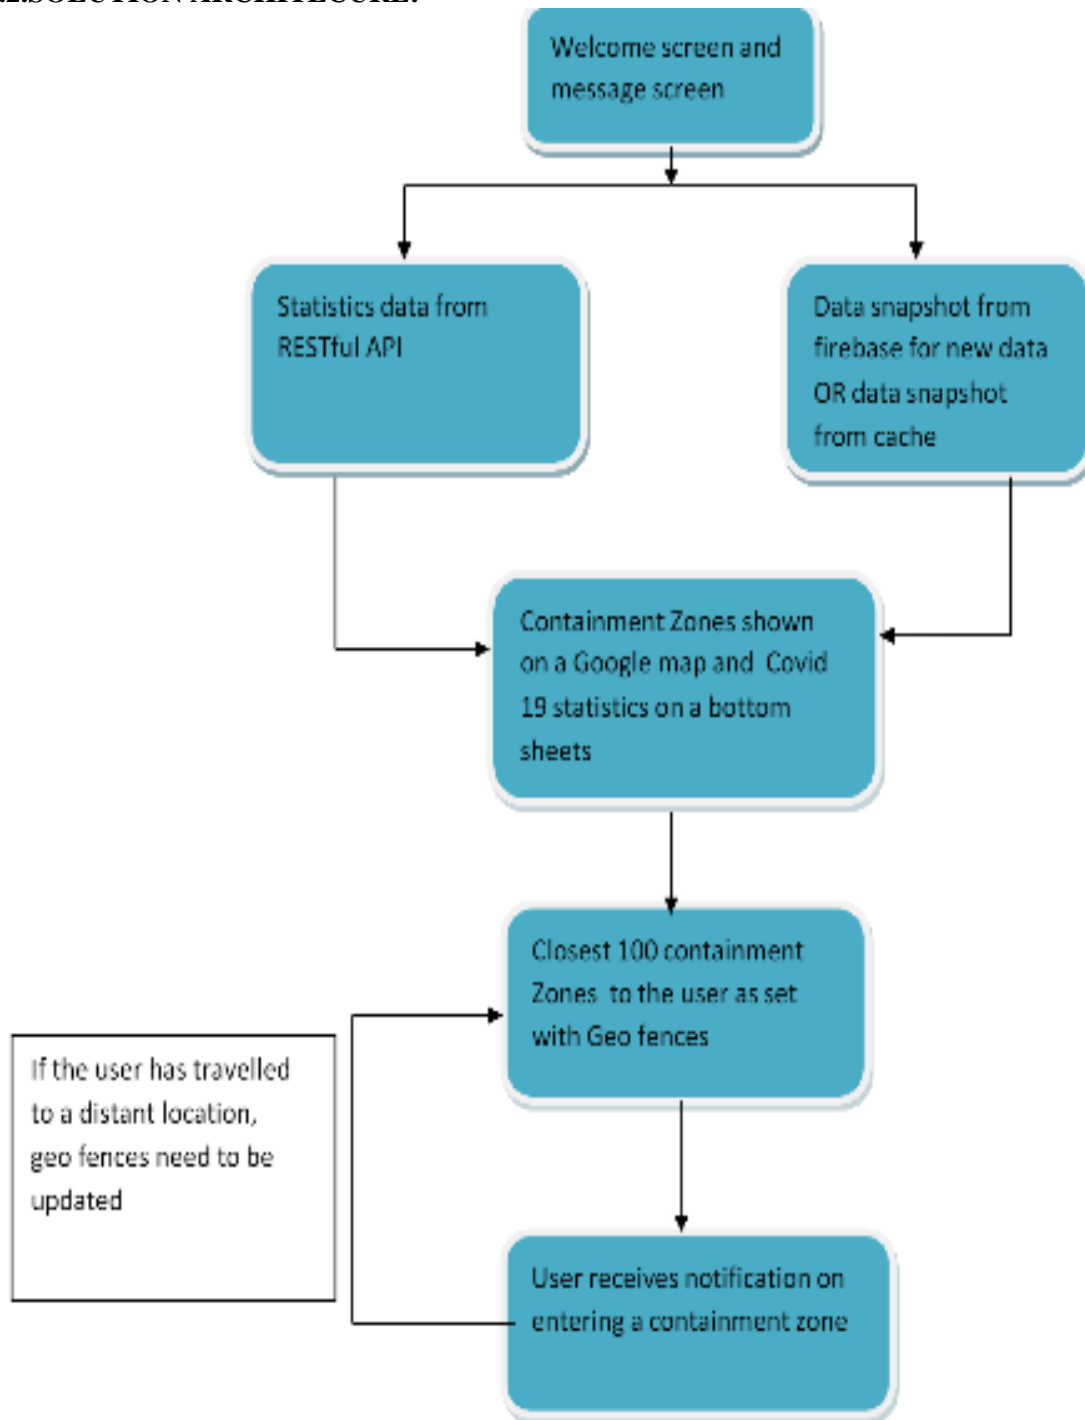

### 5.1.Data Flow Diagrams

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

#### Data Flow Diagrams:

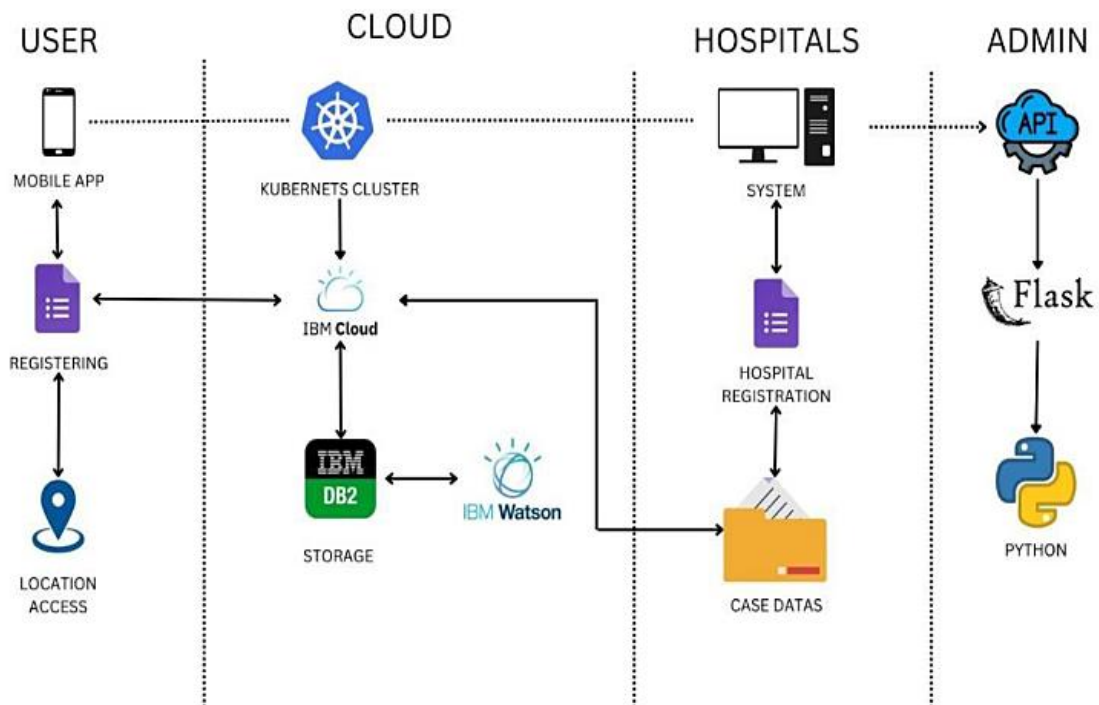

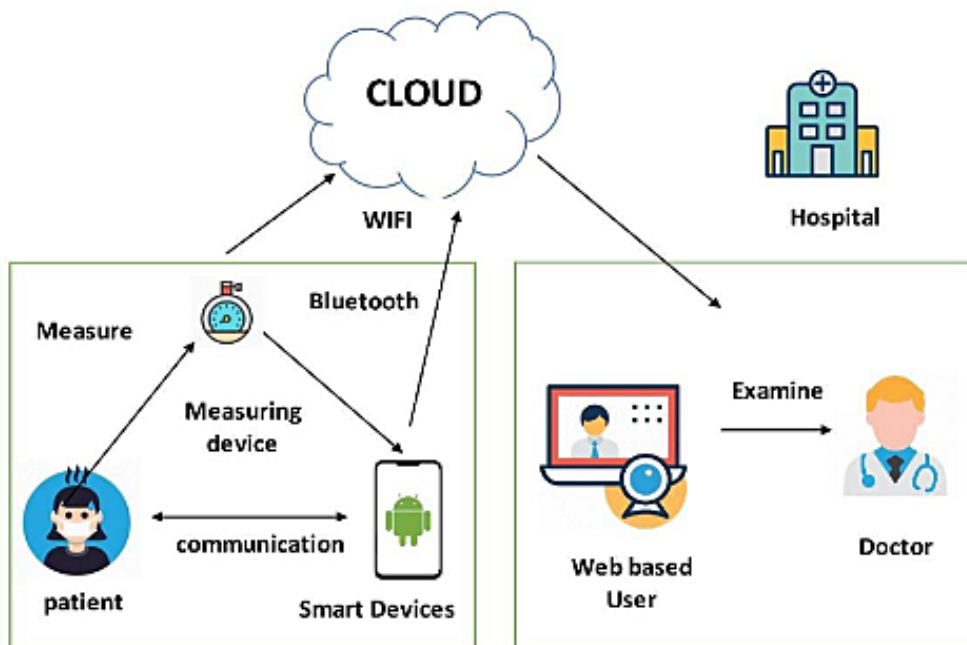

## 5.2.SOLUTION ARCHITECURE:

## 5.2 TECHNICAL ARCHITECTURE

### 5.3 USER STORIES

### User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Mobile user)	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	I can access my account / dashboard	High	Sprint-1
		USN-2	As a user, I will receive confirmation email once I have registered for the application	I can receive confirmation email & click confirm	High	Sprint-1
		USN-3	As a user, I can register for the application through Facebook	I can register & access the dashboard with Facebook Login	Low	Sprint-2
		USN-4	As a user, I can register for the application through Gmail		Medium	Sprint-1
	Login	USN-5	As a user, I can log into the application by entering email & password		High	Sprint-1
	Dashboard					
Customer (Web user)	Alert message via notification	USN-7	As a user, I can travel safely and get out of the infected zone		Medium	Sprint-3
Customer Care Executive						
Administrator	Login information	USN-1	The information received by administrator regarding login details from user is stored in DataBase.	I can store the information for future use	High	Sprint-4

## 6.PROJECT PLANNING & SCHEDULING

TITLE DATE	DESCRIPTION	DATE
Literature Survey & Information Gathering	Literature survey on the selected project & gathering information by referring the, technical papers, research publications etc.	19 SEP 2022
Prepare Empathy Map	Prepare Empathy Map Canvas to capture the user Pains & Gains, Prepare list of problem statements	19 SEP 2022
Ideation	List the by organizing the brainstorming session and prioritize the top 3 ideas based on the feasibility & importance.	19 SEP 2022

### Product Backlog, Sprint Schedule, and Estimation (4 Marks)

Use the below template to create product backlog and sprint schedule

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Registration	USN-1	User: I can register for the application by entering my email, password and verifying password.	3	High	Thanga Anu Priya
		USN-2	User: I will receive a confirmation email once I have registered for the application.	2	High	Marimuthu
		USN-3	User: I can register for the application through Gmail.	5	Medium	Madhan Kumar
		USN-4	Management: I need to register my hospitals on the site.	2	High	karthikeyan
		USN-5	User: I can log into the application by entering my email & password	3	High	Thanga anu priya

	Login	USN-6	Management: I need to login into my dashboard with my given hospital id and password.	5	Medium	Marimuthu
	Dashboard	USN-7	User: I need to give permission to access my Contacts, Location, and Storage	5	High	Madhan Kumar

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-2		USN-8	User: I get access to the dashboard which shows a map with containment zones	5	High	Karthikeyan
		USN-9	Management: I need to enter the case information of the patient that visits our hospital.	5	High	Thanga Anu Priya
	Services	USN-10	Admin: I need to provide valid information about the pandemic out there.	5	High	Marimuthu

Sprint-3	Dashboard	USN-11	Management: I need to store all the patient information on the cloud.	5	High	Madhan Kumar
	Services	USN-12	Admin: I need to provide medical advice through a chatbot.	5	Medium	Karthikeyan
		USN-13	Admin: I need to provide medical recommendations by collaborating with top hospitals.	5	Low	Thanga Anu Priya
		USN-14	Admin: I need to provide preventive measures when they travel through it.	5	High	Marimuthu
	Registration	USN-15	User: I can register for the application through Facebook.	2	Low	Karthikeyan

Sprint-4		USN-16	User: I can register for the application through Twitter.	2	Low	Madhan Kumar
	Services	USN-17	Admin: I need to alert the user when they enter pandemic zones.	3	Medium	Thanga Anu Priya
		USN-18	Admin: I need to provide special services for premium users by giving services like monitoring health by their smart bands.	3	Low	Marimuthu
	Data Collection	USN-19	Admin: I need to store all the user information on the cloud	5	Medium	Madhan Kumar

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
		USN-20	Admin: I need to collect the recent list of diseases in the world.	5	Low	Karthikeyan

## Project Tracker, Velocity & Burndown Chart: (4 Marks)

### Project Tracker, Velocity & Burndown Chart: (4 Marks)

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	20	05 Nov 2022
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022	20	12 Nov 2022
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	20	19 Nov 2022

Velocity:

Imagine we have a 10-day sprint duration, and the velocity of the team is 20 (points per sprint). Let's calculate the team's average velocity (AV) per iteration unit (story points per day)

$$AV = \frac{\text{sprint duration}}{\text{velocity}} = \frac{20}{10} = 2$$

## 6.2. Sprint Delivery Schedule

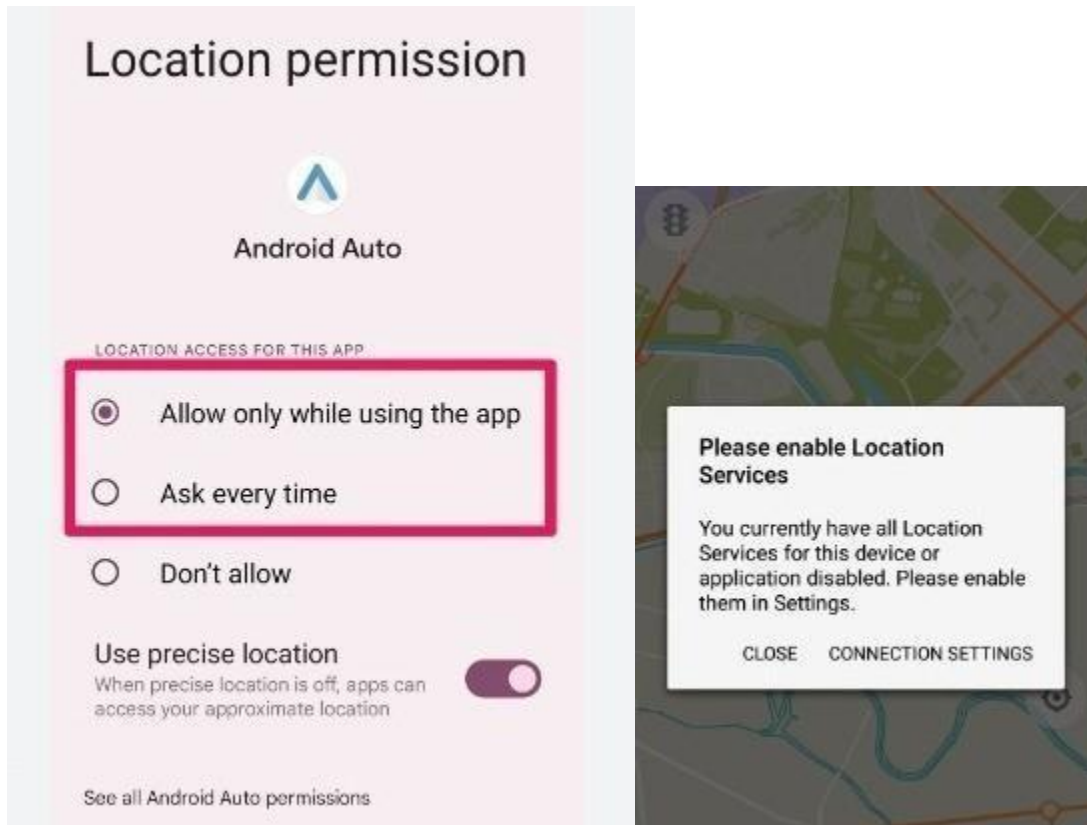

The main event during agile methodology is the sprint, the stage where ideas turn into innovation and valuable products come to life. On one hand, agile sprints can be highly effective and collaborative. At the same time, they can be chaotic and inefficient if they lack proper planning and guidance. And for this reason, making a sprint schedule is one of the most important things you can do to ensure that your efforts are successful. If you're looking to schedule your next sprint, you've come to the right place. Keep reading to learn everything you need to know about sprint scheduling, including some tips to drive the best results.

## 6.3 Reports from JIRA

Jira applications can generate email notifications for various events that happen throughout the lifecycle of an issue, including custom events. Notifications are defined within a

notification scheme (see below), which associates particular events with particular email recipients. The notification scheme is then assigned to a particular project.

## 7.CODING & SOLUTIONING (Explain the features added in the project along with code)

### 7.1 Feature 1

- i. Sign-up verification by phone number. User registration contains name, age, home address, work address (optional).
- ii. User locations are tracked by explicit user choice and stored in local storage only. During tracking user is
- iii. User uploads locally stored tracked locations and home address after testing positive for COVID-19. These locations are stored in cloud storage. Note that, no other user information except the locations are accessible by other users. Nevertheless, in case of false information administrative measures can be taken to track down the culprit (not implemented yet).

## **7.2 Feature 2**

- i. The App queries the database storage of infected locations by locally stored locations and notifies the user immediately if a match is found. This background process runs once every hour.
- ii. Users can view and post queries or relief requests through a global news feed, similar to other social media platforms.
- ii. Relief request posts are anonymous and provide only a post author contact number, which was used for verification. Other users willing to help can contact him through the app using the phone number.

## **7.3 Database Schema**

You can configure IBM® Data Server Manager (DSM) to generate alerts when specific performance issues arise on your connected Db2® database. You can select, and in some instances configure, these alerts, from the monitoring profile of a connected database. Areas that you can apply performance alerts to with DSM fall into two categories:

- i. excessive lock wait times
- ii. poorly performing statements

You activate the use of alerts by going to Settings > Monitoring Profiles, selecting a profile for editing (or creating a new profile), and then selecting the Alert Monitoring option.

By expanding the Performance list on the Alert Monitoring page, you can access all of the available alerts.

If applicable, you can configure the properties of specific alerts by rolling over the associated cell under the Action column and clicking the Configure link that appears. A pop-up box will open, allowing you to change the default values to those that better suit your requirements.

## **8.1 Test Cases**

Infrastructure-as-a-Service (IaaS) delivers fundamental compute, network and storage resources to consumers on-demand, over the Internet and on a pay-as-you-go basis. Using cloud infrastructure on a paper-use scheme enables companies to save on the costs of acquiring, managing and maintaining their own IT infrastructure. Plus, the cloud is easily accessible. Most major cloud service providers — including Amazon Web Services (AWS), Google Cloud, IBM Cloud and Microsoft Azure — offer IaaS with their cloud computing services.

Platform-as-a-Service (PaaS) provides customers a complete cloud platform — hardware, software and infrastructure — for developing, running and managing applications without the cost, complexity and inflexibility of building and maintaining that platform on-premises. Organizations may turn to PaaS for the same reasons they look to IaaS; they want to increase the speed of development on a ready-to-use platform and deploy applications with a predictable and cost-effective pricing model.

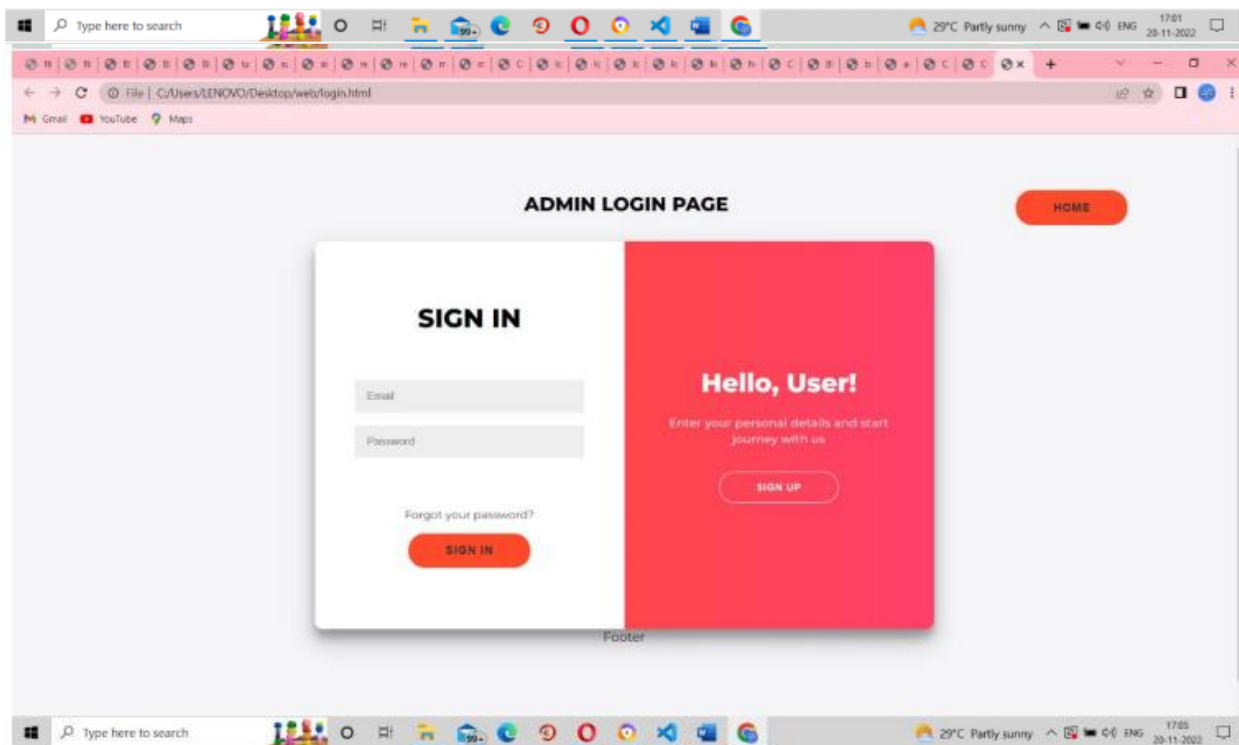

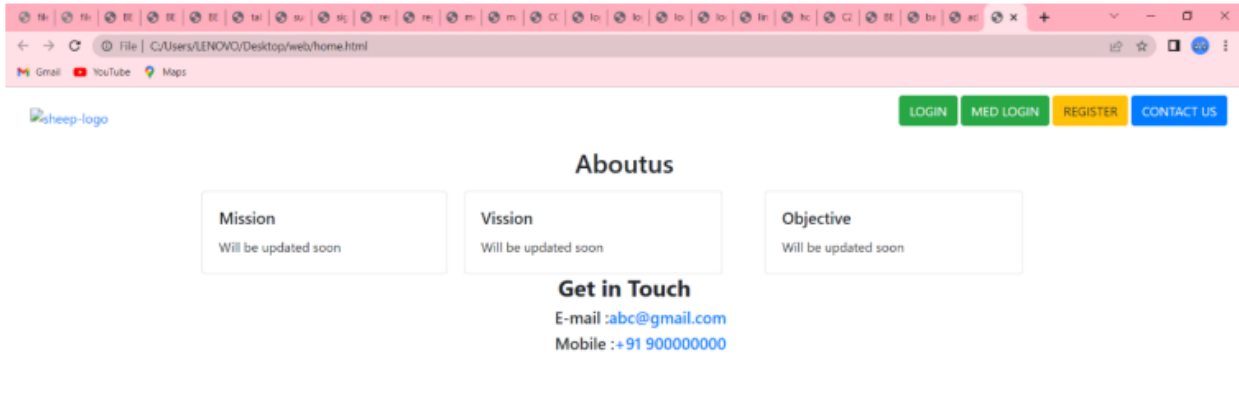

## **8.2 User Acceptance Testing**

User Acceptance Testing (UAT) is a type of testing performed by the end user or the client to verify/accept the software system before moving the software application to the production environment. UAT is done in the final phase of testing after functional, integration and system testing is done.

## **9.RESULTS:**

### **9.1 Performance Metrics:**

Tests have been carried out in various containment zones across West Bengal for the validation of the Android application. The identified containment zones chosen for the testing of the application were visited one by one. various containment zones identified for conducting the test, the date, time of entry, time of receiving the notification alerts upon entering. From it is highlighted that the application sends notification alerts within 5–8 seconds on entering.

## **10. ADVANTAGES & DISADVANTAGES**

### **ADVANTAGES:**

- People can be alerted before entering containment zone.
- Further spread of virus can be reduced considerably.

### **DISADVANTAGES:**

- Accuracy of application depends on the number of data given to the application
- Application's accuracy is directly proportional to the number of data given to the application
- about the infected patients.

## **11.CONCLUSION:**

To achieve the golden balance between lock-down as well as keeping the industries / business running together it is recommended that the Data Science techniques such as K-means can be adapted to define the micro-level demarcation of containment zones and manage them effectively. The clusters formed based on COVID-19 patient's locational data using Data Science techniques (specifically K-means) will be agile, unbiased, accurate, visible, economic and easy to apply.

This application is intended to provide information about containment zones in a particular region by alerting people, through continuous monitoring of an individuals location. Key benefits of the application are monitoring peoples activity and alerting them to their safety movements.

## **12.FUTURE SCOPE**

Although we tried to cover almost all of the aspects during our developmental phase, however we were forced to leave some aspects because of lack of time as well as monetary and other reasons. Just like in the field of software development where there are always some

shortcomings and room for improvement our application can be enhanced further:-

- 1) The application can include various government organization to help act faster.
- 2) The dataset obtained from the application can be used for predictive analysis to determine prone areas and include special method for tackling the problem in those areas.
- 3) Emergency signal in case of network failure and internet connection loss.
- 4) Tackling victim's movements.
- 5) Improved Google positioning system's precision.
- 6) The client part of application can be integrated in a single intelligent device.

For analysis purpose, we could use machine learning (ML) algorithms as well as data mining applications. There is a sub branch of machine learning known as time series analysis (TSA), which could be used to predict and analyze the data obtained through this application. Time series analysis is used to predict crop production as well as sales in different quarter.
